The Step by Step

Total Water Solution Program:

- ◆ **Step 1)** A free service call by our “Water Quality Certified” Technician to test your water for T.D.S. (total dissolved solids), Iron, Sulfur, and other high concentration minerals.
- ◆ **Step 2)** A return visit to either recommend the correct water treatment equipment or determine if current situation is satisfactory.
- ◆ **Step 3)** If necessary, and upon your approval, schedule installation of your new system. Afterwards, conduct a second water test to ensure equipment is performing to specifications.
- ◆ **Step 4)** Discuss maintenance schedule and provide hands on training for ease of use operation.
- ◆ **Step 5)** Schedule a free semi-annual visit by our technician for preventative maintenance of your system.

“We pledge that we will provide the very best level of service and provide state of the art water treatment equipment to all our customers and we back that with a performance & replacement guarantee.”

Very Truly Yours,

Stan Gorski
Member/Co-owner
